Microsoft 365
Service Adoption

Microsoft 365 Discovery

Take the first step on your adoption journey and discover the full power of Microsoft 365 and the benefits it can bring to your organisation.

Service Adoption

Microsoft 365 is a game changer in enabling companies to increase productivity and to finally ditch old and obsolete working methods. It can help your company and your people to communicate better, collaborate more effectively, and automate repetitive and time-consuming activities.

We put people at the heart of our service adoption approach and our focus is solely on the use and adoption of the technology to maximise the benefits it delivers to the end users and the business.

Discovery Workshops

To start the adoption journey, we run **Microsoft 365 Discovery Workshops** that enable clients to understand and discover the full range of services and features that Microsoft 365 has to offer, so that they can identify improved ways of working that can benefit the overall business.

Our Discovery Workshops include:

1 Walking through the most important components of Microsoft 365, including Microsoft Teams, SharePoint, OneDrive, Power Automate, PowerApps, Search, Compliance and Security.

2 Exploring a pre-built model office environment that uses these services, to increase understanding of potential use cases.

3 Interactive discussion to explore use cases where Microsoft 365 services could benefit the current business.

4 A post workshop call to discuss any findings from the workshop that the business would like to further explore.

We can flex our Discovery Workshops from 2 hours to a full day, depending on the level of detail.
